PROJECTS

VVOIZ

This is an application completely written in ReactJS and Redux. This application is for a film production company in which they are working on remaking the movie by dubbing into different languages. The software plays a vital role in different logins and coordinating the members like manager, producer, techmixer, translator, voiceactor and director. Using this application we can dub the movie in any languages by coordinating with the translator and voice actors in the studio screen.

Space Time

This is an application completely developed in ReactJS with reference from IBM Watson. This application is used to get emotions and wordcloud from the entered text or url. Also using this application we could get emotions from uploaded images also. The APIs for this application is developed in NodeJS.

Syook Pro

This is an in-house application written in ReactJS and RubyonRails. It was a management application which is delivered to the clients who require a platform for integrating their business needs. They can use this application for storing their client information and handle the business in a proper hierarchy.

Advocates Client Management

Advocate Client Management is the process of maintaining the client's records like cases, its associated hearings, personal information, contact details, fees and so on. An advocate could easily retrieve his client's information and his daily hearings information using this application. This application is to store and maintain the advocate's client records in one server using Ruby on Rails Framework.

Lead2Sale

Lead2Sale is a Lead Management System which helps automate customer acquisition process. Customer Acquisition follows a sales pipeline which defines a typical step by step process that sales reps go through to convert a prospect into a paying customer. A sales stage is created for each step in the sales process. The sales rep is responsible for moving the stages as the prospect's interest level changes.
